Education

BS: Computer Science
Northeastern University Khoury
College 2023-05

Skills

Dedicated and Curious developer with strong Full-Stack experience from 4 years of project-based learning and 1 year of Industry experience. Familiar with agile processes and comfortable with collaborating across teams.

Work History

- 2022-08 - 2022-12

Full Stack Developer Co-op
Tyler Technologies, Falmouth, MN
 - Built backend for multiple large scale enterprise apps that will be published for customers in early 2023.
 - Wrote advanced SQL queries involving large joins, merges, subqueries, and user defined functions.
 - Created APIs to integrate the backend services with Angular frontend, modified frontend on request from testers, and tested functionality using Postman.
- 2021-09 - 2021-12

Full Stack Developer Co-op
Jellyfish, Boston, MA
 - Worked within a full stack team to respond to customer feedback and squash app performance and infra bugs (primarily in SQL and Python with some React.js).
 - Built an interactive slack bot API to reserve staging environments using slash commands in slack chat.
 - Prepared company database for sharding by writing SQL scripts and generating migrations.
- 2020-07 - 2020-09

Data Analyst Intern
DeepScribe AI
 - Used SQL and Python to process data, improve data quality by scrubbing outliers and generate charts that analyze product usage and customer growth trends.
 - Wrote a technical requirements document and presented to the CFO and CEO to get approval for further action to clean data.
 - Wrote python scripts that could be ran on a schedule to enforce data quality automatically

Projects

- MVC Animator**
 - Used MVC design pattern to design an animator to convert textual inputs into the user's choice of either SVG or Java Swing animation.
 - The editable Swing animation enabled users to play, pause, fast forward, and restart the animation, and decide if it should loop when completed.
- Fitness App**
 - Built a full stack fitness app in React using axios and MYSQL to store user data.
 - Users can create accounts, create workout plans, track and use the plans, and view charts generated from their workout performance.
- Key Value Datastore (Raft)**
 - Built a distributed, replicated key-value datastore that supported get and put requests using raft protocol to maintain consensus between replicas.
